

E-Cigarettes (Vapes)

The Facts

In recent years, e-cigarettes have become a very popular stop smoking aid in the UK. Also known as vapes or e-cigs, they're far less harmful than cigarettes and can help you quit smoking for good.

What are e-cigarettes?

An e-cigarette is a device for inhaling 'vapour' (an aerosol) that usually contains nicotine. It is also known as a vaping device. There are different types and designs of e-cigarettes: some look similar to tobacco cigarettes, while others have a pen-like shape, or a tank-style shape with a mouthpiece.

What do e-cigarettes contain & how do they work?

Unlike normal cigarettes, e-cigarettes don't contain tobacco. E-cigarettes contain a battery, a heater and e-liquid. The e-liquid usually consists of nicotine dissolved in propylene glycol or glycerine and added flavourings. Heating the e-liquid produces the 'vapour', which delivers nicotine into your body when inhaled.

Will e-cigarettes help me quit smoking?

At the beginning of 2019 a research team, led by Professor Peter Hajek of Queen Mary University of London, published the results of a randomised trial that showed not just that e-cigarettes were helpful in quit attempts, but that they were almost twice as effective as the 'gold standard' combination of nicotine replacement products they were compared with.

Facts at a Glance
